Is data sovereignty part of your strategy?
It should be.

National data policies are putting pressure on companies to carefully manage where they send and store their high-value data. Your customers are going to need your help to keep their data sovereign, especially in highly regulated and globally competitive sectors like oil and gas, pharmaceuticals, healthcare and defence.

That's why the connections you use and partners you choose matter.

You need to be able to manage multinational customers' data into and out of Europe through trusted networks. You need to be sure that once data crosses into an approved jurisdiction, it can remain in that jurisdiction.

With BCE Global's transatlantic route, you can connect services from anywhere in Europe to anywhere in Canada. Once your data arrives in Canada you be can confident it can stay on our coast-to-coast data-sovereign network: We offer two diverse routes that both stay 100% inside Canada.

If you're routing data across the Atlantic, make data sovereignty part of your strategy with BCE Global.

Many companies would rather reduce risk than cut costs.

It's understandable why. The cost of a data breach goes far beyond just the value of lost or compromised data. There's the immediate cost of resolving an attack. There's the damage to your organization's reputation and brand. There's the toll of losing customers — and the market's trust.

Geographically isolating data and network traffic is key to reducing the risk and cost of breaches. That's what you get with BCE Global. Once your customers' data enters our Canadian network it can remain in the country.

For storage you can trust, all our data centers are audited to CSAE 3416 / SSAE 16 standards and secured with biometric access controls, video surveillance, 24/7 on-site security and robust firewalls.

BCE Global

Your direct connection to Canada.

Take advantage of the shortest, direct data route between Europe and Canada. Our transatlantic connection has extremely low latency and redundancy to keep traffic flowing when every millisecond counts.

You can access scalable bandwidth speeds as high as 10 Gbps through Canada's first Metro Ethernet Forum (MEF) 3.0 certified Ethernet service or up to 1/10/100 Gbps using our Wavelength service, meaning you can meet the data requirements of any size company in any sector. Automatic rerouting and configurable fault-tolerant mechanisms help to ensure the reliability and availability of your traffic so you can offer more competitive SLAs to your customers.

Once your data reaches our Canadian network, it can go anywhere in the country. That's because we've deployed more than 270,000 kilometers of fiber – enough to circle the globe **nearly seven times**.

When you think data sovereignty, think BCE Global.

Why choose BCE Global?

BCE Global provides industry-leading broadband, IP and voice wholesale products and services across Canada and at key points in the U.S. and Europe – helping you grow your businesses and meet the needs of your customers.

With an extensive team of professional services experts and 24/7 help desk availability, BCE Global provides high-quality support to interexchange carriers, local exchange carriers, wireless service providers, resellers, Internet service providers, over-the-top providers, system integrators, telcos and cablecos.
