

Bell Cyber

Cybersecurity from Bell Wholesale

Built for Resilience

Cyber threats don't wait — and neither do we. Bell Cyber, through Bell Wholesale, provides 24x7 managed security, threat detection and response, and executive advisory services to help protect what matters most. Our integrated approach helps organizations stay resilient, compliant, and ready for what's next.

Bell Cyber services are now available to Wholesale customers looking to enhance their security posture or extend cybersecurity services to their own clients.

Our Services

Security as a Service (SECaaS)

Turnkey, fully managed cybersecurity integrating SIEM, SOAR, autonomous SOC, and vulnerability management.

Security Operations Centre as a Service (SOCaaS)

24x7 managed security operations leveraging customer-owned security tools and platforms.

Fractional Chief Information Security Officers (CISO)

On-demand executive security leadership to guide strategy, governance, and risk management.

Managed DDoS protection and mitigation

Detection and mitigation designed for continuous operation, protecting against volumetric and application-layer attacks.

Managed Detection & Response (MDR)

24x7 threat detection and response across endpoints, identities, and cloud.

Purple Team Services

Collaborative attack-and-defend exercises to validate controls and improve detection and response.

Tabletop Exercises

Scenario-driven incident response simulations to test readiness, decision-making, and escalation paths.

Vulnerability Scanning & Penetration Testing

Continuous vulnerability identification and expert-led penetration testing for internal and external assets.
